# What are the main aspects of this project?

- Foodie is a website for food lovers, providing a wide range of cuisines, recipes, and restaurant reviews. It is similar to Zomato.
- Our organization strives to create a safe and inviting environment for everyone. Our team works to improve our platform and provide excellent customer service. Foodie makes it easy to explore different cuisines.

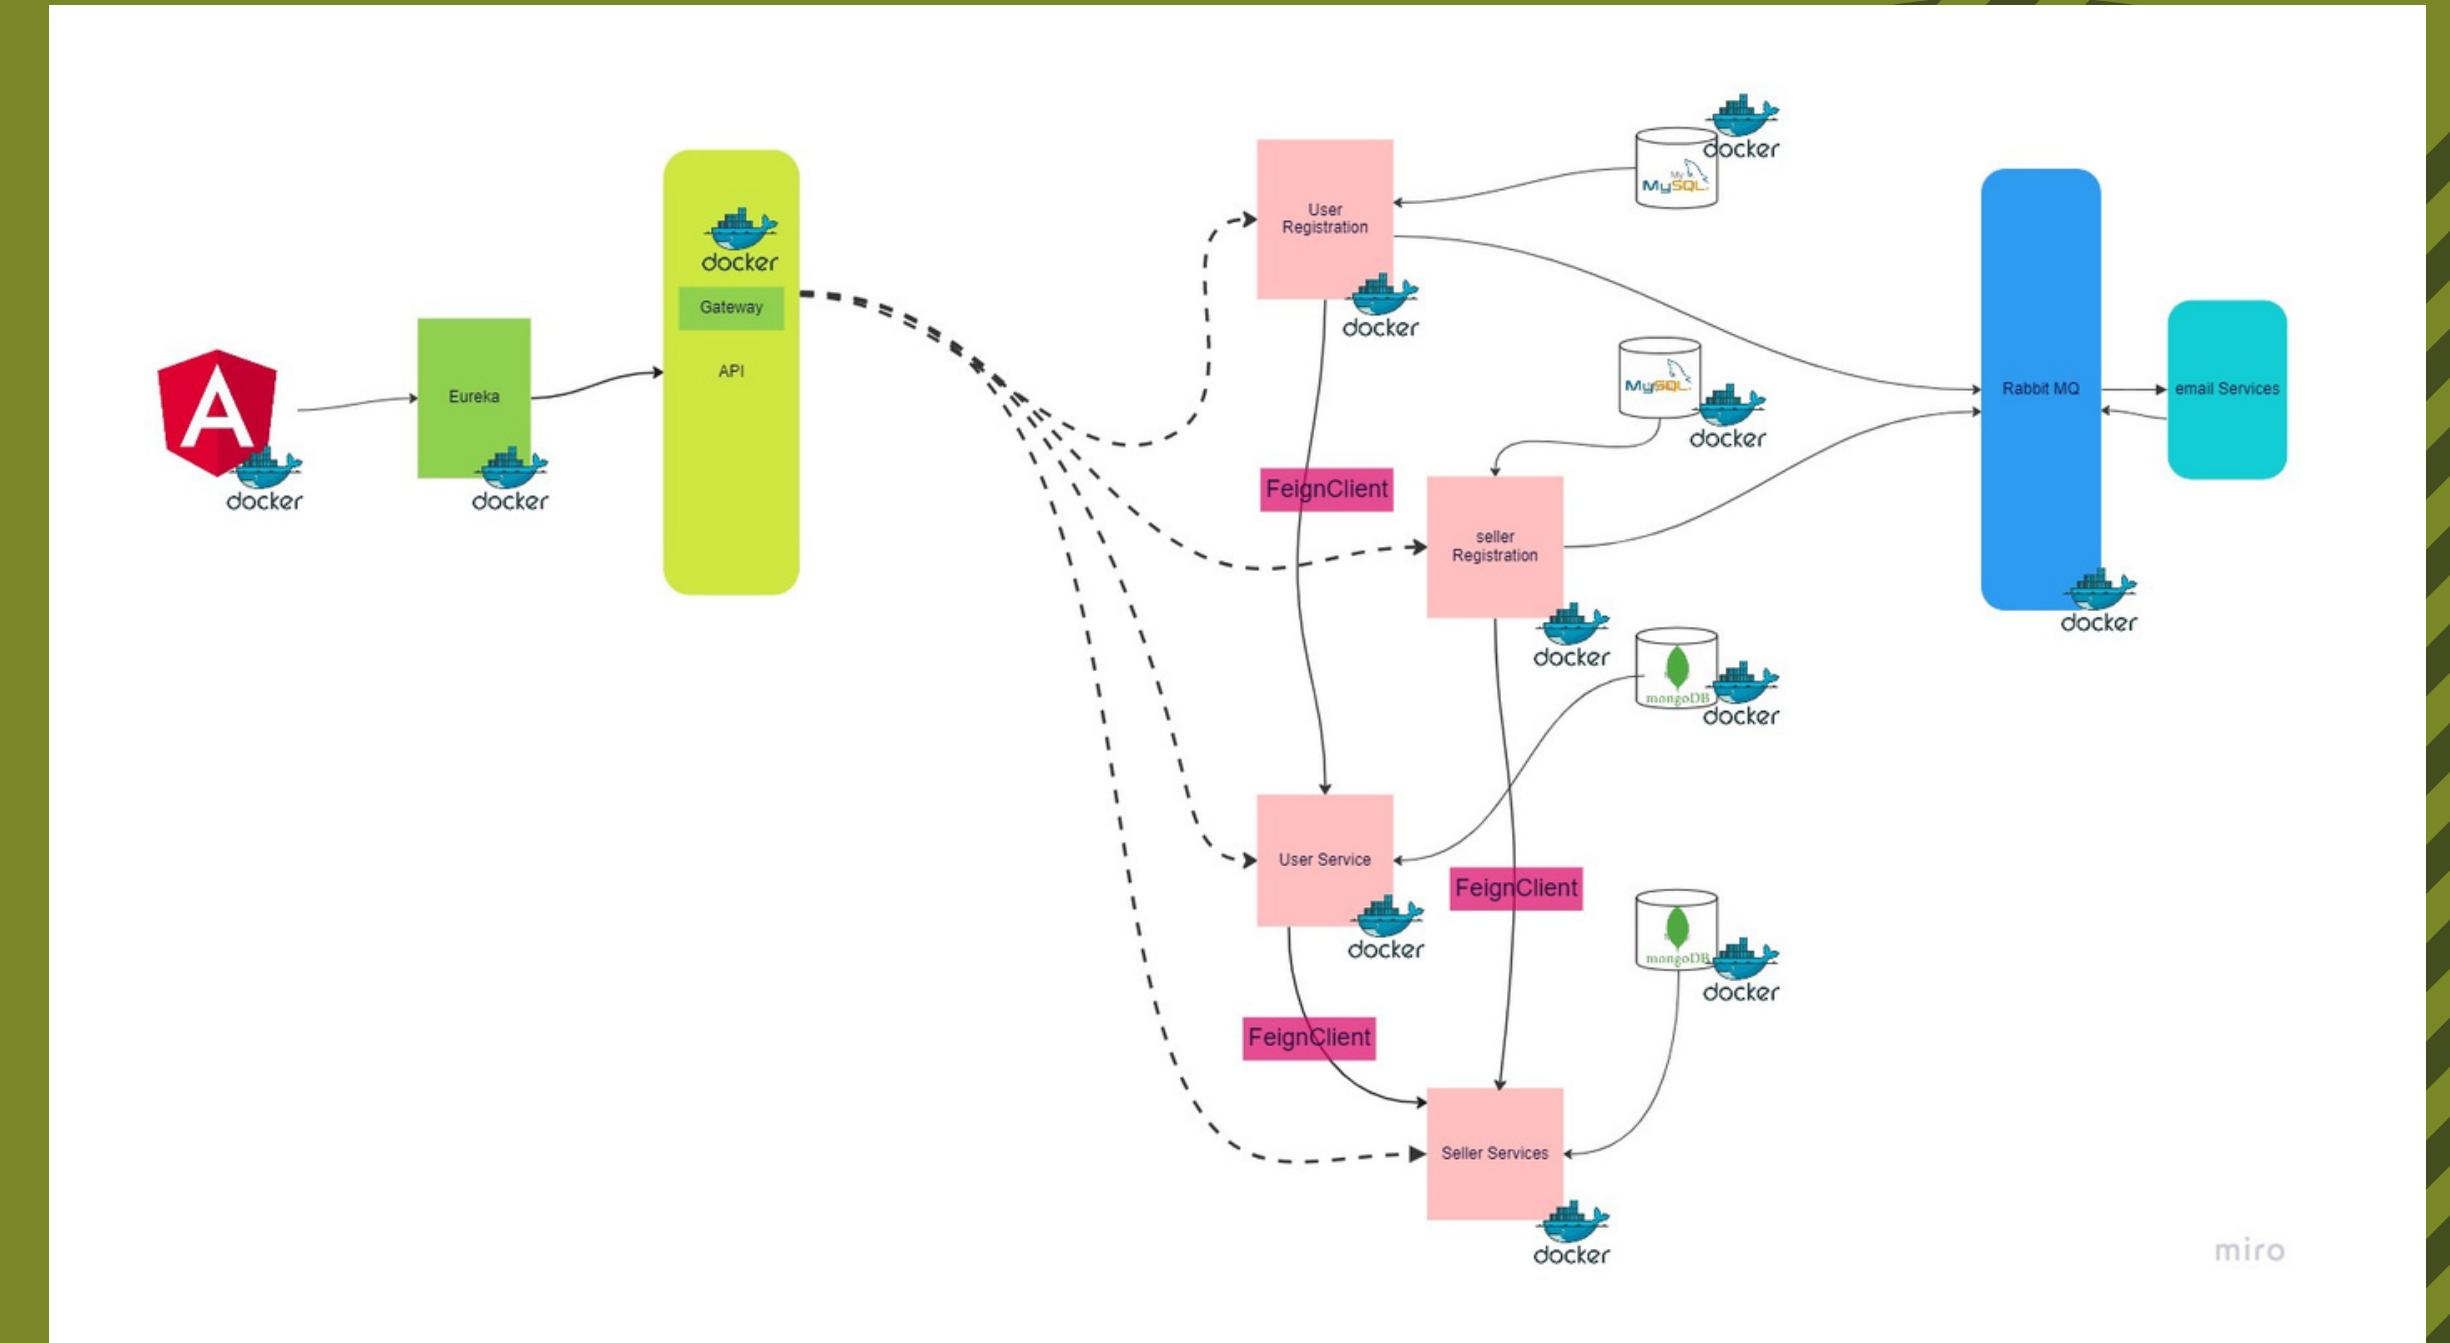

special menu

# *the foodie* Benefits

- Foodie provides its customers with quick, thorough evaluations and creative elements to help them find the perfect food or recipe.
- Our platform offers a unique "Foodie Status" feature which makes it easy and enjoyable for users to explore the culinary world .

# Online Platform for Food Delivery Architecture Diagram

# Technologies Used

- Frontend: Angular framework used for building web interfaces and interactions
- Backend: Spring Boot framework used for building robust and scalable backend services
- Messaging: RabbitMQ used as a message broker for asynchronous communication between services
- Service Registry: Eureka server used for service registration and discovery
- Gateway: Gateway used for load balancing and routing functionality for microservices
- Database: MongoDB used for its high scalability and flexibility, and MySQL used for strong consistency and ACID compliance.
